

SUBJECT TEACHING GUIDE

G1484 - Fundamentals of Biomedical Engineering

Degree in Telecommunication Technologies Engineering

Academic year 2017-2018

1. IDENTIFYING DATA					
Degree	Degree in Telecommunication Technologies Engineering			Type and Year	Optional. Year 4
Faculty	School of Industrial Engineering and Telecommunications				
Discipline	Speciality Optional Subjects				
Course unit title and code	G1484 - Fundamentals of Biomedical Engineering				
Number of ECTS credits allocated	6	Term	Semester based (1)		
Web					
Language of instruction	Spanish	English Friendly	No	Mode of delivery	Face-to-face

Department	DPTO. TECNOLOGIA ELECTRONICA E INGENIERIA DE SISTEMAS Y AUTOMATICA
Name of lecturer	JOSE LUIS ARCE DIEGO
E-mail	luis.arce@unican.es
Office	E.T.S. de Ingenieros Industriales y de Telecomunicación. Planta: - 4. DESPACHO PROFESOR (S4004)
Other lecturers	JUAN MARIA PEREZ ORIA JESUS ANTONIO ARCE HERNANDO FELIX FANJUL VELEZ

3.1 LEARNING OUTCOMES

- Knowledge of the field of biomedical engineering and its main applications
- Knowledge of the major ethical issues involved in biomedical applications
- Knowledge of basic biomedical signals that can be used in medical device applications
- Ability to design basic medical instrumentation systems
- Knowledge of most relevant instrumentation systems
- Knowledge of the principles of current medical imaging
- Knowledge of advanced principles of medical imaging
- Ability to select a priori the appropriate technique for a specific application
- Knowledge of optical sources applications in treatment and diagnosis of diseases
- Ability to select a priori the appropriate optical source for an application.
- Knowledge of ICT applications in the medical field
- Ability to design basic telemedicine systems

4. OBJECTIVES

- To know the applications of biomedical engineering
- To consider ethical issues in biomedical applications
- To know the most significant biosignals
- To design basic biomedical instrumentation systems
- To know the principles of current medical imaging
- To understand the benefits and limitations of medical imaging equipment
- To know the applications of optical and medical diagnosis to treatment
- To know how to choose the basic features of a medical imaging or optical equipment
- To know the main applications of telemedicine
- To design basic systems telemedicine

6. COURSE ORGANIZATION

CONTENTS

1	THEMATIC AREA 1: Introduction 1. Biomedical Engineering: general and ethical issues.
2	THEMATIC AREA 2: Bioinstrumentation 2. Biomedical Signals 3. Biomedical instrumentation systems
3	THEMATIC AREA 3: Diagnosis and Treatment Techniques 4. Medical imaging 5. Lasers for medical applications
4	THEMATIC AREA 4: ICTs in the clinical setting 6. Telecommunications in the clinical setting

7. ASSESSMENT METHODS AND CRITERIA

Description	Type	Final Eval.	Reassessn	%
Reports of laboratory works (30%).	Laboratory evaluation	No	No	30,00
The remaining 30% will be evaluated based on a written final test before the exam period.	Written exam	Yes	Yes	30,00
The evaluation of the subject is presented as continuous assessment with a final test. Ongoing evaluation consists of proposed classroom work for delivery in groups, with a weight of 40%.	Work	No	Yes	40,00
TOTAL				100,00
Observations				
Attendance at lab is mandatory, as well as delivery of reports of laboratory works. Non-attendance or non-delivery will lead to fail the subject. Failure to deliver the proposed classroom work will lead to a score of 0 on that part. In order to pass the course, the sum of scores should be at least 5 points.				
Observations for part-time students				
Part-time students who are not eligible for the continuous assessment will get their final mark by the laboratory works, with a weight of 50% and compulsory attendance, and the final written exam, with a weight of 50%.				

8. BIBLIOGRAPHY AND TEACHING MATERIALS

BASIC

J.D. Enderle, S.M. Blanchard, J.D. Bronzino, Introduction to Biomedical Engineering, Ed. Academic Press, 2005.
 A.A. Bharath, Introductory Medical Imaging, Ed. Morgan&Claypool, 2009.
 Ronald W. Waynant, Lasers in Medicine, Ed. CRC Press, 2002.
