

SUBJECT TEACHING GUIDE

G1090 - Steam and Gas Turbines II

Degree in Marine Engineering

Academic year 2019-2020

1. IDENTIFYING DATA					
Degree	Degree in Marine Engineering			Type and Year	Compulsory. Year 3
Faculty	School of Maritime Engineering				
Discipline	Topic				
Course unit title and code	G1090 - Steam and Gas Turbines II				
Number of ECTS credits allocated	6	Term	Semester based (2)		
Web					
Language of instruction	Spanish	English Friendly	No	Mode of delivery	Face-to-face

Department	DPTO. CIENCIAS Y TECNICAS DE LA NAVEGACION Y DE LA CONSTRUCCION NAVAL
Name of lecturer	SERGIO GARCIA GOMEZ
E-mail	sergio.garcia@unican.es
Office	E.T.S. de Náutica. Planta: + 2. DESPACHO (210)
Other lecturers	ANTONIO VEGA OMAÑA

3.1 LEARNING OUTCOMES

- To calculate the internal and external of the TV losses.
- Calculate powers and peripherals and internal performance, effective power and mechanical performance on
- To acquire knowledge about the regulation of power steam turbines.
- Calculate the thermal balance of an installation of a ship turbines.
- Optimize the constructive elements of the steam turbine.
- Knowing how to perform the operation start-up, shutdown and operation of steam turbines aboard a ship.
- Knowing how to calculate the power and efficiency of the steam turbine installation.
- Knowing how to apply the techniques of maintenance and inspection in a steam turbine.
- Knowing how to calculate the surface heat exchange in a condenser of a steam turbine installation. Analysis, control and minimize the problem caused by biofouling (biofouling) of the exchange surface of the condenser
- Knowing the possible techniques for optimizing the basic cycles of gas turbines.
- Knowing the operation of the compressor gas turbines.
- Knowing the bodies of gas turbines: combustion chambers, nozzles and heat exchangers.
- Ability to start operation and regulation of gas turbines.
- Operate the main and auxiliary machinery and the corresponding control systems.
- Management of the operation of the machinery of the Propulsion installation.
- Plan and schedule operations.
- Operation, monitoring, performance evaluation and maintenance of the propulsion system security and auxiliary machinery.
- Manage the operation of electrical and electronic control equipment.

4. OBJECTIVES

Knowing how to power steam turbines is regulated, what internal and external losses of these turbines are and know how to calculate the power and performance.

Knowing the construction and materials of different parts of steam turbines and gas . Knowing techniques maintenance and driving steam turbines in ships. Study capacitors turbine installations steam and compressors in gas turbines. Knowing how you can optimize the basic cycles of turbines organic gas and make the study of them.

Train the student in relation to the steam and gas turbines at the operational level , in accordance with the provisions of Table A-III / 1 of the Code of training, certification and guard for seafarers, as amended (STCW -78/2010). The student will achieve knowledge, understanding and sufficiency on the following aspects:

- Basic construction and operating principles of the systems of marine steam turbine machines.
- Basic construction and operating principles of marine gas turbine machine systems.
- Basic construction and operating principles of the machine systems, including: fluid flow and characteristics of the lubricating oil, fuel and cooling systems.
- Preparation, operation, fault detection and necessary measures to prevent breakdowns in the following control systems and machines: main machine and related auxiliary machines.
- Preparation, operation, fault detection and necessary measures to prevent breakdowns in control systems and machines for auxiliary propulsion machinery and related systems.
- Preparation, operation, fault detection and necessary measures to prevent breakdowns in the following control systems and machines: steam boilers, steam turbines, associated auxiliary and steam systems.

Train the student in relation to steam and gas turbines at the management level , in accordance with the provisions of table A-III / 2 of the Code of training, certification and guard for seafarers, as amended (STCW-78/2010). The student will achieve knowledge, understanding and sufficiency about:

- Project characteristics and operating mechanisms of the main machines and related auxiliary machinery: marine steam turbines.
- Project characteristics and operating mechanisms of the main machines and related auxiliary machinery: marine gas turbines.
- Theoretical knowledge: Propulsion characteristics of diesel engines, steam and gas turbines, including speed, power and fuel consumption.
- Theoretical knowledge: Thermal cycle, thermal performance and thermal balance of steam turbines and marine gas turbines.
- Practical knowledge: Start and stop the main propulsion machine and the auxiliary machinery, including the corresponding systems.
- Practical knowledge: Operation, monitoring, evaluation of performance and effective maintenance of the propulsion system security and auxiliary machinery.
- Theoretical knowledge: Project characteristics and system configurations of automatic control equipment and safety devices for the main engine.

6. COURSE ORGANIZATION

CONTENTS

1	Analysis of internal losses in steam turbines: Losses nozzles. Losses on fixed and mobile pallets. Losses output speed. Frictional losses disc and ventilation. Interstitial internal losses. External losses in a steam turbine: Losses mechanical. Losses by radiation and heat conduction To the exterior. Interstitial external losses. losses operation outside the design point Loses shock. Methods to reduce losses. powers and Returns. thermal balance.
2	Power control in steam turbines. Methods of power regulation. Regulation qualitative or throttling of steam. Regulation quantitative or varying the degree of admission. Mixed regulation. Regulation by direct steam passage I live to an intermediate staging. Regulating Condensing turbine. Turbine regulation backpressure. Willans straight.
3	Construction of steam turbines. materials used in the construction of steam turbines. Vanes. Discs and drums. Axes. Stator. diaphragms nozzle holder. Rotor. Types. Balanced static and dynamic. Manufacturing processes. Axis. Bearings. Shutters.
4	Capacitors steam turbines. Calculation heat exchange surface. Growth control biological fouling film (Biofouling). Removal of biofouling
5	Maintenance techniques. Importance of the gaps. Measurement of radial clearances. Measure clearances Axial. Importance of forced lubrication. Elements to inspect the turbine. Frequency of testing and inspections. General information on damage control. Driving steam turbines. Reasons for appropriate heating. Heating the turbine. Removing machines. Emergency operation. Safety precautions during operation. Using the toner. Lashing and the shaft destrincado sea.
6	Basic optimization cycle gas turbines. Regenerative open with intermediate cooling cycle compression. Regenerative open cycle intermediate heating on expansion. closed cycles and combined.
7	Compressors used in gas turbines. theory compression. Euler equation. static energy and Kinetic energy. A compression ratio staggering. moving blades. Influence angle output blade. Diffuser. Volute and divergence. and losses yields. Characteristic curves.

8	Organic Study of gas turbines. cameras combustion. Types. Injectors exchangers hot. Starting and regulation of TG.
9	Operation and Maintenance of Gas Turbines. Preventive maintenance: Introduction. Review of the gas turbine . Predictive Maintenance: Introduction. Analysis of Operating parameters. Energy balance (path analysis) . Historical analysis. Analysis of vibrations. Oil analysis. Corrective maintenance: Origin of failures. Faults in The air intake. Compressor faults. Faults Typical in expansion turbine. Vibration in turbines of gas .

7. ASSESSMENT METHODS AND CRITERIA

Description	Type	Final Eval.	Reassessn	%
Description Theory and exercises exam	Written exam	No	Yes	30,00
Description Theory and exercises exam	Written exam	No	Yes	30,00
Description Classroom Practices	Others	No	Yes	20,00
Description Group work	Work	Yes	No	10,00
Laboratory practices	Laboratory evaluation	Yes	No	10,00
TOTAL				100,00
Observations				
The final exam will have a maximum score of 80%. Therefore, un-student who chooses not to follow in the continuous assessment procedure and go exclusively to the final exam, you can only get a '8' as the highest rating. On second call partial grades obtained during the course are not saved.				
Observations for part-time students				
Students who are enrolled part-time will not be able to perform the continuous assessment and will present the final exam, enough to obtain a maximum grade of 8.
