

SUBJECT TEACHING GUIDE

G587 - Topography and Geodesy

Degree in Energy Resources Engineering

Academic year 2019-2020

1. IDENTIFYING DATA					
Degree	Degree in Energy Resources Engineering			Type and Year	Compulsory. Year 2
Faculty					
Discipline	Subject Area: Fundamentals of Cartographic Engineering Module: Training in Common with the Mining Branch				
Course unit title and code	G587 - Topography and Geodesy				
Number of ECTS credits allocated	6	Term	Semester based (2)		
Web					
Language of instruction	Spanish	English Friendly	No	Mode of delivery	Face-to-face

Department	DPTO. INGENIERIA GEOGRAFICA Y TECNICAS DE EXPRESION GRAFICA				
Name of lecturer	JULIO MANUEL DE LUIS RUIZ				
E-mail	julio.luis@unican.es				
Office	E.P. de Ingeniería de Minas y Energía. Planta: + 0. SALA - REUNIONES (Dirección Escuela Minas) (057)				
Other lecturers	FELIPE PIÑA GARCIA				

3.1 LEARNING OUTCOMES

- Measurement of lengths, areas, volumes, etc. on mapping at different scales and formats.
 - calculation of earthworks by longitudinal and transverse profiles, horizontal layers, etc.
 - determine errors in the observable, through a treatment of error as a random variable
 - fundamental knowledge of geodetic astronomy to understand the scientific basis on which GPS is supported.
- Determination, management of the observable and calculation of the uncertainty observing angles with compass, optical theodolite and electronic theodolite
 - determination, handling the observable and calculation of the uncertainty to observe distances with tape, wire and rules invar, tachometer, Horizontal stay, range finders
 - determination, management of the observable and calculation of uncertainties to observe with topographical stations.
 - determination, handling the observable and calculation of the uncertainty observed heights with optical level electronic or laser.
- Project, to control and run the various classical topographic methodologies most appropriate to carry out a station topographic
 - project, to control and run the various classical topographic methodologies most appropriate to carry out with a theodolite
 - projecting, control and run the various classical topographic methodologies most appropriate to carry out with a range finder
- Knowledge of the basic fundamentals in which sits the Photogrammetry
 - Fotointerpretar and carry out measurements on aerial photographs isolated
 - project, to control and to run the methods most appropriate photogrammetric mapping requirements and availability of existing media
 - rating economically photogrammetric products and activities.

4. OBJECTIVES

Didactic Unit I

The main objective of this thematic block is to inform students of the most elementary concepts of the surveying, geodetic, mapping, etc. in a way that these definitions will serve as introduction to the topo-geodesic world. In addition a small RAID is conducted on the study of error as a random variable and geodetic astronomy, with the aim to know basic but fundamental aspects in cartographic areas.

Didactic Unit II

The main objective of this thematic block is that students know and are able to capture the observable, process such observable and also calculate the expected tolerances result of uptake of observable with the most common topographical instruments currently. In order to achieve clarity in the structuring of equipment, these are divided according to the observable which are able to capture, angles, distances and heights.

Didactic Unit III

Main objective of this thematic block is to show students the different techniques and methods of observation and calculation that can develop in topography with the objective of optimizing yields in time of observation in countryside and Cabinet, the necessary human resources, different instruments and the accuracy that can be obtained from each of the different teams studied in the previous unit didactics.

Didactic Unit IV

The main objective of this thematic block is to inform students of a technique that is now fully developed and in base can be obtained which cartography on a massive scale, photogrammetry. Students are given to the different methods of photogrammetric, as a flight, the different types of support, photogrammetric restitution project is being developed and even economically rating a photogrammetric project.

6. COURSE ORGANIZATION

CONTENTS

- 1 DIDACTIC UNIT I. INTRODUCTION TO SURVEYING AND GEODESY
1. DEFINITION OF SCENARIOS AND BASIC CONTENTS
 - 1.1 Surveying and Geodesy
 - 1.1.1 Land form
 - 1.1.2 Geographical elements on surfaces approach
 - 1.1.3 Geographic Referencing
 - 1.1.4 topographic and geodetic networks
 - 1.2 REFERENCE FRAME
 - 1.2.1 General concepts
 - 1.2.2 geometric aspects of a plan or map
 - 1.2.3 Limit of visual perception
 - 1.2.4 Surveying Engineering
 - 1.3.- modeling CONVENTIONAL OF RELIEF
 - 1.3.1 Surveying
 - 1.3.2 Basic systems of representation
 - 1.3.3 Exploitation of cartographic information
 - 1.3.4.- The problem of mapping
 - 1.4.- READING MAPS AND PLANS
 - 1.4.1 General Introduction
 - 1.4.2 particularized aspects of the maps and plans
 - 1.4.3 Introduction to numerical mapping systems
 - 1.4.4 Concluding remarks on the information contained in the plans
 2. MEASUREMENT UNCERTAINTY. APPLICATION TO surveying and geodesy
 - 2.1 NEED AND LIMITS study. MEASURE AS RANDOM VARIABLE

Inevitability 2.1.1, causes and types of errors

 - 2.1.2 Introduction to the study of a random variable
 - 2.2 DENSITY FUNCTIONS that rely on the normal distribution
 - 2.2.1 Normal distribution
 - 2.2.2 distributions derived from normal
 - 2.2.3 Approach to the use of normal and its derivatives in basic metrology
 - 2.2.4 Simplified Treatment of measurement errors
 - 2.3 Additional Considerations

Parameter estimation 2.3.1

 - 2.3.2 Determination of precision instruments
 3. GEODETIC ASTRONOMY BASICS
 - 3.1 INTRODUCTION TO ASTRONOMY
 - 3.1.1 Purpose and division of Astronomy
 - 3.1.2 notions of cosmography
 - 3.1.3 Movements earth
 - 3.1.4 Geographical coordinates
 - 3.1.5 The solar system. Introduction to celestial mechanics
 - 3.1.6 Reminder of the main units and astronomical constants
 - 3.2 COORDINATE SYSTEMS
 - 3.2.1 Introduction
 - 3.2.2 Horizontal coordinates
 - 3.2.3 equatorial coordinates Time
 - 3.2.4 equatorial absolute coordinates
 - 3.2.5.- ecliptic coordinates
 - 3.2.6 Summary of coordinate systems
 - 3.3 EARTH IN THE UNIVERSE
 - 3.3.1 Setting the cosmos
 - 3.3.2 The distances in astronomy
 - 3.3.3 The Milky Way and solar system
 - 3.3.4 The HR diagram
 - 3.3.5 Radio astronomy: quasars and pulsars
 - 3.3.6.- Astronomical Observatories

2

DIDACTIC UNIT II INSTRUMENTS TOPOGRAFICOS

1. angular measurements

1.1 GENERAL DESCRIPTION OF A goniometer

1.1.1 angles in the horizontal plane and angles in the vertical plane

1.1.2 Essential parts of a goniometer

1.2 OPTICAL THEODOLITE

1.2.1 Essential parts of an optical theodolite

1.2.2 Classification of optical theodolites

1.2.3 - Using theodolite

1.2.4 representative parameters of a theodolite

1.2.5 Checks and corrections

1.3.- THE COMPASS

1.3.1 The Earth's magnetic field

1.3.2 Types of compasses

1.3.3 Checks and uses

1.4.- ELECTRONIC THEODOLITE

1.4.1 Electronic measurement of angles

1.4.2 Assessment Systems angles

1.5.- errors in the angular measurements

1.5.1 systematic and accidental errors

1.5.1.1.- verticality error

1.5.1.2.- address error

1.5.1.3.- pointing error

1.5.1.4.- read error

1.5.1.5.- Total Error

1.5.2 Methods to increase accuracy

2. DISTANCE MEASUREMENT

2.1 DIRECT MEASUREMENT OF DISTANCES

2.1.1 Introduction

2.1.2 Measuring tapes and rulers

2.1.3 Invar Threads

2.2 INDIRECT DISTANCE MEASURING METHODS FOR stadia

2.2.1 Basis of stay

2.2.2 stadia goggles. The tachometer

2.2.2.1.- differentiators

2.2.2.2.- tachometer Functionality

2.2.3. Tacheometric Relations

2.2.3.1.- Assessment distances

2.2.3.3.- coordinate employment Introduction

2.2.4 self-reducing tacheometers

2.2.5.- Horizontal Stay Invar

2.2.5.1.- Constituents

2.2.5.2.- Method of evaluating measurement

2.2.5.3.- accuracy in evaluating the distance

MEASURE 2.3 indirect subsidiary DISTANCE BY ELECTROMAGNETIC METHODS

2.3.1 Basis of Electronic Distance Measurement

2.3.1.1.- General

2.3.1.2.- Special evaluation of the distance

2.3.2 Functionality of the Electronic Distance Measurement

2.3.2.1.- Precisions

2.3.2.2.- precautions in using distance meters

Additional advantages 2.3.2.3.-

3. topographical STATIONS

3.1 MEASUREMENT COMPACT

3.2 SIGNIFICANT HIGHLIGHTS

CURRENT OFFER 3.3 TOPOGRAPHIC STATIONS

- 3.3.1 widespread improvements
- 3.3.2 Improvements particularizas
- 3.3.3 Final Thoughts
- 4. HEIGHT MEASURE
 - 4.1 INTRODUCTION TO STUDY altimetry
 - 4.2 LEVELING trigonometric
 - 4.2.1 Correction for sphericity and refraction
 - 4.2.1.1.- Correction for sphericity
 - 4.2.2.2.- refraction correction
 - 4.2.2 Errors in trigonometric leveling
 - 4.4.- LEVELING GEOMETRICA
 - 4.4.1.- Foundation
 - 4.4.2 Types of levels
 - Conventional level 4.4.2.1.-
 - 4.4.2.2.- Laser Level
 - 4.4.2.3.- level digital or electronic
 - 4.4.3 Errors in geometric leveling
 - 4.4.3.1.- mistakes apparatus
 - 4.4.3.2.- Additional error due to lack of verticality of stay
 - 4.4.3.3.- Total altimeter Error
 - 4.4.4.- Ways of working with a level
 - 4.4.4.1.- leveling work indoors
 - 4.4.4.2.- leveling work abroad
 - 4.4.4.3.- work with earthmoving machinery
 - 4.4.4.4.- work abroad with advanced instrumentation

DIDACTIC UNIT IV GENERAL PHOTOGRAMMETRIC

1. Introduction to photogrammetry

1.1 DEFINITION AND GENERAL

1.1.1 Definition

1.1.2 Photogrammetry and photointerpretation

1.1.3 Differences between aerial photography and map

1.1.4 Advantages of photography as a source of information

1.1.5 Historical Background

PHOTOGRAPHIC PROCESS 1.2

1.2.1 General principles of photography

1.2.2 Geometrical conditions of photogrammetric flight

1.2.3 Geometrical characterization of a frame isolated

1.2.3.1.- scale concept

1.2.3.2.- graphical operation of an air frame

1.3.- stereoscopy

1.3.1 The stereoscopic vision

1.3.2 The stereoscopic pair

1.4.- Photointerpretation

1.4.1 Significant aspects

1.4.2 Interpretation of the relief

1.4.3 Elements of Human Geography

1.5.- orthophotography

1.6.- APPLICATIONS IN CIVIL ENGINEERING

2. PRINCIPLES OF FOTOGRAMETRIA

2.1 MAKE Perspective

2.1.1 Definition of a perspective beam for its internal data

2.1.2 Determination of the position in space of a beam

2.1.3 Identification of homologous rays

2.1.4. Restitution

2.1.5. Applications of photogrammetry

2.1.5.1. Surveying applications

2.1.5.2. No surveying applications

2.2. OPTICAL AND PHOTOGRAPHIC ELEMENTS

2.2.1 Introduction

2.2.2 emulsions

2.2.3 Types and main characteristics

2.2.4 supports emulsion

2.3 QUALITY OF IMAGE PHOTO

CHAMBER AIR 2.4

2.4.1 Essentials

2.4.2 widespread Controls

3. The general method of photogrammetry

3.1 INTRODUCTION

3.2 INTERNAL AND EXTERNAL ORIENTATION

3.2.1 Internal Guidance

3.2.2 External Guidance

4. Photogrammetric Restitution

4.1 INTRODUCTION TO SYSTEMS georeferencing

4.2 CONTRIBUTION TO CAPTURE FOTOGRAMETRIA georeferenced information

4.3 DIGITAL RESTITUTION

4.3.1 Digital Image Processing

4.3.2 The digital restoration

4.3.3 The digital orthoimage

5. photogrammetric ACTIVITIES

5.1. OVERVIEW

5.2. FLIGHT PROJECT

5.2.1. Key features
 5.2.2. Application
 5.3. COST APPROACH
 6. METRIC FOTOGRAMETRIA LAND WITH CAMERAS
 6.1 INTRODUCTION
 6.2 Taking Pictures
 6.3 MAIN similarity relations
 6.4 EVALUATION OF ERRORS AND INFLUENCE
 CHARACTERIZED 6.5.- APPLICATIONS
 6.5.1 Cathedral Calahorra
 6.5.2 Jesuit Church (Santander)

7. ASSESSMENT METHODS AND CRITERIA

Description	Type	Final Eval.	Reassessn	%
periodic evaluations not qualifying	Written exam	No	No	20,00
evaluating practices	Work	No	No	20,00
ORDINARY COURSE TEST	Written exam	Yes	Yes	60,00
TOTAL				100,00
Observations				
All those students who do not pass the subject in the June exam will be able to present themselves to the September session, respecting the grade obtained during the semester in the practices and periodic non-qualifying tests				
Observations for part-time students				
Students enrolled in Part Time will be offered the following alternative evaluation : - Periodic non-eliminatory assessments will be made on a date agreed by the teacher and the student at the beginning of the quarter. - The evaluation of the practices will be carried out through equivalent work. - The ordinary and extraordinary tests of the subject will be the same.				

8. BIBLIOGRAPHY AND TEACHING MATERIALS

BASIC

* Topografía aplicada a la Ingeniería Civil.
 Rafael Ferrer Torio y Benjamín Piña Patón.
 Servicio de Publicaciones. Escuela Técnica Superior de Ingenieros de Caminos, Canales y Puertos. Santander, 39005.
