

SUBJECT TEACHING GUIDE

G602 - Petrochemical Refining

Degree in Energy Resources Engineering

Academic year 2019-2020

1. IDENTIFYING DATA					
Degree	Degree in Energy Resources Engineering			Type and Year	Compulsory. Year 4
Faculty					
Discipline	Subject Area: Technology of Mineral and Energy Resources Module: Training in Energy Resources, Fuels and Explosives				
Course unit title and code	G602 - Petrochemical Refining				
Number of ECTS credits allocated	6	Term	Semester based (1)		
Web					
Language of instruction	Spanish	English Friendly	Yes	Mode of delivery	Face-to-face

Department	DPTO. INGENIERIAS QUIMICA Y BIOMOLECULAR				
Name of lecturer	AURORA GAREA VAZQUEZ				
E-mail	aurora.garea@unican.es				
Office	E.P. de Ingeniería de Minas y Energía. Planta: + 1. DESPACHO 2 - I. AMBIENTAL (147)				
Other lecturers	JAVIER PINEDO ALONSO				

3.1 LEARNING OUTCOMES

- Understanding the refinery engineering topics from basic concepts and unit operations, covering some separation technologies (distillation of crudes to refinery fractions), and conversion processes (catalytic reforming and isomerization, alkylation, hydroconversion, fluid catalytic cracking).

4. OBJECTIVES

The objectives of the subject are:

- (2) learning the inlet and outlet streams in a refinery scheme, the characterization of the crude oils, and the main refined products;
- (1) learning the processes operated in the petroleum refining: separation technologies (distillation of crudes to refinery fractions), and conversion processes (catalytic reforming and isomerization, alkylation, hydroconversion, fluid catalytic cracking);
- (3) environment aspects to be considered in the petroleum refining.

6. COURSE ORGANIZATION

CONTENTS

1	Part I. Chemical processes and unit operations. 1. Some applications of unit operations. Distillation. 2. Mass and enthalpy balances. Liquid-vapor equilibria. 3. Stage/plate efficiency in unit operations. 4. Diffusion.
2	Part II. Petroleum refining and petrochemical plants. 5. Introduction. 6. Initial processing in petroleum refining. 7. Petroleum refinery: operation units and catalytic processes. 8. Chemical reactors. 9. Petrochemical plants. 10. Environmental and safety aspects.
3	Part III. Carbochemistry. 11. Introduction. 12. Processes of coal conversion. 13. Chemical reactors. 14. Environmental y safety aspects.

7. ASSESSMENT METHODS AND CRITERIA				
Description	Type	Final Eval.	Reassessn	%
Written reports of case studies worked with process simulation tools in computers Mínimum mark:0,00 (scale 0-10) Date: a week after each case study is completed Contribution to the overall grading mark: 20 %	Laboratory evaluation	No	Yes	20,00
Written reports of individual and group activities Mínimum mark: 0,00 (scale 0-10) Date: a week after each activity is completed Contribution to the overall grading mark: 20%.	Work	No	Yes	20,00
Written exam of the subject Mínimum mark: 5,00 (scale 0-10) Date: in dates fixed by the School for the February call or the September call. Contribution to overall grading mark: 60 %.	Written exam	Yes	Yes	60,00
TOTAL				100,00
Observations				
The recovery will take place in the special period dedicated to the effect (September) and in the same form of the tests of the ordinary evaluation. Those students who have not passed the parts of computer practices and work, will be able to return the corrected reports before the date of the extraordinary examination of September in order to be evaluated again.				
Observations for part-time students				
-
