

## SUBJECT TEACHING GUIDE

### G991 - Automatic Control Systems I

#### Degree in Industrial Electronic Engineering and Automatic Control Systems

Academic year 2019-2020

| 1. IDENTIFYING DATA              |   |                  |                    |                  |                    |
|----------------------------------|---|------------------|--------------------|------------------|--------------------|
| Degree                           | Degree in Industrial Electronic Engineering and Automatic Control Systems               |                  |                    | Type and Year    | Compulsory. Year 2 |
| Faculty                          | School of Industrial Engineering and Telecommunications                                 |                  |                    |                  |                    |
| Discipline                       | Subject Area: Electronics and Automation<br>Module in Common with the Industrial Branch |                  |                    |                  |                    |
| Course unit title and code       | G991 - Automatic Control Systems I  |                  |                    |                  |                    |
| Number of ECTS credits allocated | 6   | Term             | Semester based (1) |                  |                    |
| Web                              |   |                  |                    |                  |                    |
| Language of instruction          | Spanish   | English Friendly | No                 | Mode of delivery | Face-to-face       |

| Office           | E.T.S. de Ingenieros Industriales y de Telecomunicación. Planta: - 3. DESPACHO PROFESORES (S3021) |  |  |  |  |
| Other lecturers  | DAMASO FERNANDEZ PEREZ<br>LUIS GARCIA RODRIGUEZ<br>JOSE ANGEL JUAREZ CRESPO                       |  |  |  |  |

### 3.1 LEARNING OUTCOMES

- Knowledge of Automation Technologies and their Applications.
- Knowledge of representation techniques of Dynamic Systems.
- Using mathematical fundamentals and techniques, applied to Control Engineering, to attain the knowledge of analysis and design methods in the time and frequency domains.
- Knowledge of some software tools for modeling and simulation of systems.

#### 4. OBJECTIVES

To present the different types of industrial automatisms, their classification and technologies.

To define and present the most common ways of representing dynamic systems.

To present the basic control actions.

To present analysis techniques in the time domain.

To present analysis techniques in the frequency domain.

#### 6. COURSE ORGANIZATION

##### CONTENTS

|   |  |
|---|--|
| 1 | Introduction to industrial control methods and techniques. Basic concepts and components.  |
| 2 | AUTOMATISMS:<br>Industrial automatisms: definition, types and classification. Technologies and examples.   |
| 3 | Representation of time-continuous control systems.   |
| 4 | TIME-DOMAIN RESPONSE<br>Introduction.- Routh Stability Criterion - Static Error Coefficients - Response of 1st, 2nd and higher order systems.                                |
| 5 | BASIC CONTROL ACTIONS<br>Introduction.- Proportional, Derivative and Integral Controls. PID Control.   |
| 6 | ROOT LOCUS<br>Introduction.- Properties.- Rules for its representation - Root contours.  |
| 7 | FREQUENCY-DOMAIN RESPONSE<br>Introduction.- Sinusoidal Transfer Function. - Bode Diagrams - Polar Diagrams - Correlation between Time-Domain and Frequency-Domain Responses. |
| 8 | STABILITY IN THE FREQUENCY DOMAIN<br>Introduction.- Nyquist Criterion - Relative Stability: Gain Margin and Phase Margin.- Closed Loop Response.                             |

#### 7. ASSESSMENT METHODS AND CRITERIA

| Description  | Type                  | Final Eval. | Reassessn | %             |
|--|-----------------------|-------------|-----------|---------------|
| Assessment Test 1  | Written exam          | No          | Yes       | 10,00         |
| Assessment Test 2  | Written exam          | No          | Yes       | 10,00         |
| Laboratory Practices   | Laboratory evaluation | No          | Yes       | 25,00         |
| Group Project  | Work                  | No          | Yes       | 10,00         |
| Other Continuous Assessment Activities   | Others                | No          | No        | 5,00          |
| Final Exam   | Written exam          | Yes         | Yes       | 40,00         |
| <b>TOTAL</b>   |                       |             |           | <b>100,00</b> |
| <b>Observations</b>  |                       |             |           |               |
| In order to pass this course, the student must obtain, at least, the 50% of the total points and the grade of the final exam cannot be less than 4 (out of 10).            |                       |             |           |               |
| <b>Observations for part-time students</b>   |                       |             |           |               |
| The part-time students must indicate to the professor if they can follow regularly the previewed activities. If not, they will have to do an exam at the laboratory (25%). |                       |             |           |               |

## 8. BIBLIOGRAPHY AND TEACHING MATERIALS

### BASIC

Ingeniería de control moderna / Katsuhiko Ogata 4 Ed. 2003

Feedback control of dynamic systems / Gene F. Franklin, J. David Powell, Abbas Emani-Naeini. 1994

Sistemas de control moderno / Richard C. Dorf, Robert H. Bishop. 10ª ed., Pearson Educación, 2008.

Sistemas automáticos de control / por Benjamin C. Kuo. Compañía Editorial Continental, 1991.

Automatismos Industriales. José A.Barbado Santana, J. Martin Sierra, J. Aparicio Bravo. Creaciones Copyright. 2011
