SUBJECT TEACHING GUIDE

M1892 - Fundamentals of environmental modeling

Master's degree in integrated management of water systems

Academic year 2019-2020

1. IDENTIFYING DATA					
Degree	Master's degree in integrated management of water systems			Type and Year	Compulsory. Year 1
Faculty	School of civil Engineering				
Discipline					
Course unit title and code	M1892 - Fundamentals of environmental modeling				
Number of ECTS credits allocated	2	Term		Semester based (1)	
Web					
Language of instruction	Spanish	English Friendly	No	Mode of delivery	Face-to-face

Department	DPTO. CIENCIAS Y TECNICAS DEL AGUA Y DEL MEDIO AMBIENTE
Name of lecturer	ANDRES GARCIA GOMEZ
E-mail	andres.garcia@unican.es
Office	E.T.S. de Ingenieros de Caminos, Canales y Puertos. Planta: + 0. INVESTIGADOR DEL G.E.S.H.A. (0023)
Other lecturers	

3.1 LEARNING OUTCOMES
- To identify the elements that make up a numerical model understanding their role.
- To know the options and techniques available to conduct an environmental flows study using a numerical model.
- To perform simple numerical integration of one-dimensional problems using discretization techniques.
- To criticize the results provided by a numerical model.

4. OBJECTIVES
The main objective is to provide the student an overview of the techniques applied in the simulation of environmental flows problems.

6. COURSE ORGANIZATION

CONTENTS	
1	Introduction to numerical models.
2	Discretization techniques.
3	Introduction to methods for solving equations.
4	Computational modelling of environmental flows.

7. ASSESSMENT METHODS AND CRITERIA

Description	Type	Final Eval.	Reassessn	%
Introduction to the discretization of a mathematical model	Others	No	Yes	10,00
Finite differences discretization of equations	Others	No	Yes	10,00
Finite volume discretization of equations	Others	No	Yes	10,00
Development of a one-dimensional numerical model for solving an environmental flows problem	Others	No	Yes	30,00
Final exam	Written exam	Yes	Yes	40,00
TOTAL				100,00

Observations

As accorded by the relevant committees, as a general rule, and unless stated otherwise anywhere in this guide:
- A student cannot request a reexamination if the original grade obtained in the evaluation was not a fail .
- The reexamination activity will take the same form than the original evaluation activity.
- Grades are measured on a numeric scale going from 0 to 10, where values smaller than 5 are a Fail.

Marks obtained in the course evaluation activities will be kept until the re-sit examination period.

Observations for part-time students

Part-time students will need to assist to the final exam of the subject and complete practical activities similar to those worked during the course.
