

SUBJECT TEACHING GUIDE

G1779 - Physics of Materials

Double Degree in Physics and Mathematics
Degree in Physics

Academic year 2020-2021

1. IDENTIFYING DATA			
Degree	Double Degree in Physics and Mathematics Degree in Physics		Type and Year Optional. Year 5 Optional. Year 4
Faculty	Faculty of Sciences		
Discipline	Subject Area: Physics of Materials Mention in Fundamental Physics		
Course unit title and code	G1779 - Physics of Materials		
Number of ECTS credits allocated	6	Term	Semester based (2)
Web	https://aulavirtual.unican.es		
Language of instruction	English	Mode of delivery	Face-to-face

Department	DPTO. CIENCIAS DE LA TIERRA Y FISICA DE LA MATERIA CONDENSADA		
Name of lecturer	FERNANDO RODRIGUEZ GONZALEZ		
E-mail	fernando.rodriguez@unican.es		
Office	Facultad de Ciencias. Planta: + 2. DESPACHO PROFESORES (2008)		
Other lecturers	FERNANDO AGUADO MENENDEZ ENRIQUE JARA MARTINEZ JAVIER RUIZ FUERTES		

3.1 LEARNING OUTCOMES

- Knowledge and use of basic models and theories for describing the physical properties of materials.
- Skill development to setup experiments for measuring physical properties of materials.
- Employ of basic instrumental devices of interest in materials science.
- To be able of classifying and characterizing materials according to their structure.

4. OBJECTIVES

Classification and characterization of materials according to their structure and physical properties.

Knowledge of physical models enabling students to understand a wide variety of materials properties.

Measuring physical properties in different types of materials.

Acquire an ample background of knowledge and skillness in different experimental techniques and apparatuses of common use in research laboratory and industry.

The study of technical reports about a complex instrument to apply to new physical measurements.

6. COURSE ORGANIZATION

CONTENTS

1	Topic 1 Introduction. Types and classification of materials. Relationship between structure and physical properties.
2	Topic 2 Dielectric and Optical Properties of materials. Insulators and Semiconductors. Complex refractive index. Absorption and Reflection of light by Materials. Absorption and luminescence processes in solids. Configurational coordinate energy diagrams. Relevant Optical and Dielectric phenomena.
3	Topic 3 Electrical properties of materials. Insulator, Metals and Semiconductors. Band structure and conductivity.
4	Topic 4 Magnetic properties of materials. Magnetic phenomena: microscopic description. Diamagnetism, Paramagnetism and Ferromagnetism. Other magnetic structures: structural characterization.
5	Topic 5 Superconductivity. Experimental phenomena and characterization of superconductors. BCS theory. Predictions and new superconductor materials. Laboratory work: magnetic levitation
6	Topic 6 Functional and nanostructured materials. Structure and physical properties. Applications. Multifunctional materials. Interplay between properties and types of materials. Nanometric sized materials. Size effects and quantum confinement. Influence on physical properties.
7	Topic 7 Laboratory works: Microscopic techniques for materials analysis and characterization Optical absorption spectroscopy: electronic structure of insulators and semiconductors. Emission/excitation spectroscopy: Photoluminescent materials.
8	Topic 8 Laboratory works: Macroscopic techniques for analysis and characterization of materials Electrical resistivity in metals. Thermal effects. Characterization of Ferromagnetic materials: Hysteresis loops in soft and hard ferro/ferrimagnetic materials.

7. ASSESSMENT METHODS AND CRITERIA

Description	Type	Final Eval.	Reassessn	%
Practical work reports	Work	No	No	50,00
Final exam Test-type exam of all topics covered by the three controls. Control marks of passed controls can be used as marks for corresponding parts in the final exam. Each control exam will last 1 hour.	Written exam	Yes	Yes	50,00
Each control exam will take place after finishing the corresponding topics. There will three controls for topics 1-2; 3-4; and 5-6. The marks can be used in the final exam.	Written exam	Yes	Yes	0,00
TOTAL				100,00
Observations				
<p>The student must perform four experiments along the course in one 4-5 hour laboratory session in six different weeks. The student must write three laboratory reports and one result sheet (Topic 5). The evaluation of each laboratory work will consist of 1) the experimental report and/or result sheet (80%) and 2) laboratory work (20%). The latter evaluation is based on a personal and continuous tracking about queries and attitude of the student in the laboratory (1,25 hr/report). There will be three controls through test exams (20 min. each) and the final exam will last two hours. The final grade of the course will be the average of grades obtained from laboratory works and exams. In the event of an online teaching imposed by COVID19, the laboratory work will be explained online and the corresponding experimental data will be transferred to each student for study and analysis following indications in the practical work guide. The evaluation will be done in the same way as in the lab, although the analysis work will be increased to compensate the lack of experimental work in the laboratory.</p>				
Observations for part-time students				
The Professor will provide academic facilities for partial-time students.				

8. BIBLIOGRAPHY AND TEACHING MATERIALS

BASIC

Topics 1-8

R. J. Naumann, Introduction to the Physics and Chemistry of Materials, CRC Press, Boca raton (2009).

Topics 1,2,6,7

M. Fox, Optical Properties of Solids, Oxford University Press, Oxford (2001).

Topics 1,3-6,8

K. H. J. Buschow and F. R. De Boer, Physics of Magnetism and Magnetic Materials, Kluwer (2003).
