

SUBJECT TEACHING GUIDE

G48 - BASIC STATISTICS

Double Degree in Physics and Mathematics Degree in Mathematics

Academic year 2020-2021

1. IDENTIFYING DATA					
Degree	Double Degree in Physics and Mathematics Degree in Mathematics			Type and Year	Core. Year 1 Core. Year 1
Faculty	Faculty of Sciences				
Discipline	Basic Related Subject Area: Basic Module				
Course unit title and code	G48 - BASIC STATISTICS				
Number of ECTS credits allocated	6	Term	Semester based (2)		
Web					
Language of instruction	Spanish	English Friendly	No	Mode of delivery	Face-to-face

Department	DPTO. MATEMATICAS, ESTADISTICA Y COMPUTACION				
Name of lecturer	ARACELI TUERO DIAZ				
E-mail	araceli.tuero@unican.es				
Office	Facultad de Ciencias. Planta: + 1. DESPACHO PROFESORES (1052)				
Other lecturers					

3.1 LEARNING OUTCOMES

- It is intended that students get basic knowledge of statistics and probability as well as the necessary intuition to interpret the results of statistical studies. The course also pays attention to the problem of the presentation of statistical data.

4. OBJECTIVES

Developing the intuition about phenomenon random.

Understanding basic principles of Probability

Understanding basic principles of Statistics.

Manage and understand the different methods of statistical inference, recognizing its applicability to real problems

Be able to use basic method of summarizing sets of data

Calculate probability of events in a discrete probability space.

Recognizing real situations where the most common probability distributions appear.

Using the concept of independence in simple cases and apply the central limit theorem.

Check the accuracy of certain assumptions through hypothesis test

6. COURSE ORGANIZATION

CONTENTS

1	DESCRIPTIVE STATISTICS. GRAPHICAL REPRESENTATIONS. Population and sample. Descriptive statistics and statistical inference. Types of data. Types of variables. Measures of central tendency and dispersion. Graphical representations.
2	COMBINATORIAL PROBLEMS. Ordered and unordered samples.
3	DISCRETE PROBABILITY SPACES. Discrete probability spaces. Independence. Bernoulli trials. Conditional probability. Bayes theorem.
4	RANDOM VARIABLES. Random variable. Measures of central tendency and dispersion. Linear regression and correlation.
5	LIMIT THEOREMS. The Law of Large Numbers. Poisson distribution and normal distribution as a limit of binomial distributions.
6	HYPOTHESIS TESTING. Hypothesis tests about the mean of a normal population. Hypothesis tests to compare means of two normal populations (independent samples). Comparing two proportions.
7	CONTINGENCY TABLES. GOODNESS OF FIT TESTS. Test for multinomial distribution.
8	Final exam
9	Tutorial

7. ASSESSMENT METHODS AND CRITERIA

Description	Type	Final Eval.	Reassessn	%
It will be an exam of problems of the chapters 1 to 4.	Written exam	No	Yes	40,00
It will be an exam of problems of the chapters 5 to 7.	Written exam	Yes	Yes	40,00
Solve some problems with a software package	Laboratory evaluation	Yes	Yes	20,00
TOTAL				100,00
Observations				
Students who have passed the first exam have the opportunity to do a new exam in June to get up note.				
Observations for part-time students				
The assessment of part-time students follow the same rules as the assessment of full-time students				

8. BIBLIOGRAPHY AND TEACHING MATERIALS
