

## SUBJECT TEACHING GUIDE

G1493 - Channel Coding

Degree in Telecommunication Technologies Engineering

Academic year 2021-2022

| 1. IDENTIFYING DATA              |   |                  |                    |                  |                  |

| Office           | Edificio Ing. de Telecomunicación Prof. José Luis García García. Planta: - 2. DESPACHO (S202) |  |  |  |  |
| Other lecturers  |   |  |  |  |  |

### 3.1 LEARNING OUTCOMES

- The student will acquire the knowledge and skills for selecting the most appropriate channel coding schemes fulfilling the requirements imposed by different telecommunication networks and services.

### 4. OBJECTIVES

The main objective is to study coding and decoding techniques for linear block and convolutional codes most commonly used in communication systems. Furthermore, a detailed analysis of the convolutional codes performance is carried out. This brings the possibility to present trellis coded modulation fundamentals and performance. Last but not least, turbo codes an iterative decoding techniques are tackled.

| 6. COURSE ORGANIZATION |   |
|------------------------|---|
| CONTENTS               |   |
| 1                      | Coding fundamentals. User messages. Codeword. Parity-check matrix. Some examples: ISBN.   |
| 2                      | Channel coding fundamentals. Finite fields. Transmission channel. Decision rule. Minimum distance. Concept of erasure. Redundancy and Singleton bound.  |
| 3                      | Decoding with the Slepian table. Choosing the generator-matrix G. Hamming codes. Shortened and extended codes. Correction, detection and residual error probability. Algorithms for incomplete decision schemes.                              |
| 4                      | Continuous codes. Convolutional codes. Code memory and constraint length. Matrix and polynomial representation. Trellis diagram. Transfer function. Free error distance. Hard vs soft decoding. Viterbi Algorithm and performance evaluation. |
| 5                      | Trellis coded modulation. Information theory principles of TCM coding gain. TCM design rules. Parallel branches. TCM decoding. Performance analysis.  |
| 6                      | Turbo codes. Parallel concatenation of convolutional codes. Forward and backward convolutional codes. Interleavers. Turbo-code decoding. Soft-Output-Viterbi-Algorithm (SOVA).  |

| 7. ASSESSMENT METHODS AND CRITERIA   |              |             |           |               |
|--|--------------|-------------|-----------|---------------|
| Description  | Type         | Final Eval. | Reassessn | %             |
| The subject will be evaluated through the continuous evaluation. The students who succeed they will have the average mark of the three exams. Eventually, they will be able to participate in the final exam getting as final mark (FM), $FM = \text{Max}(CEM, 0.60 \cdot CE)$ | Written exam | No          | Yes       | 100,00        |
| Those students who fail with the continuous evaluation they will have to attend to the final exam. The students not attending the lectures or deciding to do not rely on the continuous evaluation they will have the mark corresponding to the final exam.                    | Written exam | Yes         | Yes       | 0,00          |
| <b>TOTAL</b>   |              |             |           | <b>100,00</b> |
| <b>Observations</b>  |              |             |           |               |
| The students not attending the lectures or deciding not to participate in the continuous evaluation will obtain the mark corresponding to the final exam.<br>In the case that COVID-19 triggers a health alert the exams will be carried out remotely.                         |              |             |           |               |
| <b>Observations for part-time students</b>   |              |             |           |               |
| The students not attending the lectures or deciding not to participate in the continuous evaluation will obtain the mark corresponding to the final exam.<br>In the case that COVID-19 triggers a health alert the exams will be carried out remotely.                         |              |             |           |               |
