

SUBJECT TEACHING GUIDE

G37 - Mathematics III: Integra Calculus

Degree in Physics

Academic year 2021-2022

1. IDENTIFYING DATA					
Degree	Degree in Physics			Type and Year	Core. Year 1
Faculty	Faculty of Sciences				
Discipline	Subject Area: Basic Mathematics for Science Basic Module				
Course unit title and code	G37 - Mathematics III: Integra Calculus				
Number of ECTS credits allocated	6	Term	Semester based (2)		
Web					
Language of instruction	Spanish	English Friendly	Yes	Mode of delivery	Face-to-face

Department	DPTO. MATEMATICAS, ESTADISTICA Y COMPUTACION				
Name of lecturer	BEATRIZ PORRAS POMARES				
E-mail	beatriz.porras@unican.es				
Office	Facultad de Ciencias. Planta: + 1. DESPACHO (1041)				
Other lecturers					

3.1 LEARNING OUTCOMES

- Understanding the concept of integral and being able to work with it, geometrically, intuitively and formally.
- Using the elementary techniques of integration for one variable functions in a fluent way, as well as being able to compute areas, volumes and lengths.
- Being able to compute tangents, normals, areas, volumes, etc., for surfaces and for planar or three dimensional curves.
- Computing iterated integrals in several variables over elementary regions, determining the limits of the integrals involved and applying the change of variables formula whenever appropriate.
- Computing line and surface integrals, both for scalar and for vector fields. Applying the classical theorems of Stokes, Green and divergence on specific settings.

4. OBJECTIVES

Within the context of the programs for bachelor degrees in Physics and in Mathematics, the subject Integral Calculus is an introduction to the main types of integrals used in classic applications of Infinitesimal Calculus. Its aims are: understanding the different types of situations where these integrals are used for modelling ; getting a working knowledge of how integrals can be evaluated, as well as their main properties and their relationships among them; getting started in mathematical language and mathematical reasoning; and getting used to intellectual work.

6. COURSE ORGANIZATION

CONTENTS

1	1. Riemann integral for one real variable functions. Fundamental Theorem of Calculus. Computation of primitives. Improper integrals.
2	2. Integrals of functions of several real variables: Concept and fundamental properties. Riemann criteria. Iterated integrals. Fubini theorem. Integrals of functions defined over other bounded sets. Change of variables in double integrals. Change of variables in triple integrals. Some applications: mean value, center of gravity, ...
3	3.-Line Integrals: Smooth simple curves in the plane and space. Smooth piecewise simple curves. Closed curves. Curve length. Integral of a scalar field on a path. Integral of a vector field along a path. Green Theorem. Conservative fields.
4	4.- Surface Integrals. Smooth simple surfaces. Smooth piecewise simple surfaces. Surface area. Integral of a scalar field over a surface. Integral of a vector field over a surface. Stokes Theorem. Gauss Theorem.

7. ASSESSMENT METHODS AND CRITERIA

Description	Type	Final Eval.	Reassessn	%
Quiz on the content of chapter 1	Activity evaluation with Virtual Media	No	Yes	20,00
Quiz on the content of chapter 2	Activity evaluation with Virtual Media	No	Yes	20,00
First partial exam about content of chapters 1 and 2	Written exam	No	Yes	10,00
Quiz on the content of chapter 3	Activity evaluation with Virtual Media	No	Yes	20,00
Quiz on the content of chapter 4	Activity evaluation with Virtual Media	No	Yes	20,00
Second partial exam about content of chapters 3 and 4	Written exam	No	Yes	10,00
TOTAL				100,00
Observations				
Continuous evaluation (ordinary call): 1st Questionnaire 2nd Questionnaire First partial + recovery first questionnaire 3rd Questionnaire 4rd Questionnaire Second partial + recovery 2nd questionnaire + (recovery first partial or (+1) point in first partial) Extraordinary call: first partial recovery + second partial recovery				
Observations for part-time students				
The same evaluation type applies to part time students				

8. BIBLIOGRAPHY AND TEACHING MATERIALS

BASIC
M. Spivak, Calculus, Reverté
J.E. Marsden y A.J. Tromba, Cálculo vectorial (edición 3ª o posterior). Addison-Wesley.
