508 - Marine and Atmospheric Climate

Erasmus Mundus Joint Master Degree in Coastal Hazards - Risks, Climate Change Impacts and Adaptation

Curso Académico 2023-2024

1. DATOS IDENTIFICATIVOS				
Título/s	Erasmus Mundus Joint Master Degree in Coastal Hazards - Risks, Climate Change Impacts and Adaptation		Tipología v Curso	Obligatoria. Curso 1
Centro	Escuela Técnica Superior de Ingenieros de Caminos, Canales y Puertos			
Módulo / materia	Asignaturas del Erasmus Mundus Joint Master Degree in Coastal Hazards			
Código y denominación	508 - Marine and Atmospheric Climate			
Créditos ECTS	5	Cuatrimestre	Cuatrimestral (1)	
Web				
Idioma de impartición	Inglés	Forma de impartición	Presencial	

Departamento	DPTO. CIENCIAS Y TECNICAS DEL AGUA Y DEL MEDIO AMBIENTE		
Profesor responsable	MELISA MENENDEZ GARCIA		
E-mail	melisa.menendez@unican.es		
Número despacho	Edificio IH Cantabria. Planta: + 2. DESPACHO (226)		
Otros profesores	MANUEL DEL JESUS PEÑIL		

3.1 RESULTADOS DE APRENDIZAJE

- The student will know and understand the climatic variability associated with the different time scales of interest of the environmental variables that will be used throughout the Master's degree.

Students will be able to associate and characterise the different climatic processes associated with meteorology , oceanography and hydrology, and will learn the nomenclature and meaning of the basic terms.

The student will know and be able to handle climatic databases in different formats .

The student will be able to write a report defining marine and coastal climatic characteristics at any point along the coast.

The student will know the meteo-oceanographic variables and how to combine these variables in a deterministic and probabilistic way for their application in problems associated with the coastal environment.

The student will understand the phenomenon of Climate Change and the specific implications associated with variables of interest in the coastal environment.

4. OBJETIVOS

- The student will know and understand the main phenomena associated with the climate system, especially those processes associated with the water and energy fluxes in the marine and coastal environment.

- The student is able to handle the instrumental and numerical databases in order to characterize the maritime climate at any coastal location.

- The student will understand and be able to use information related to climate variability for different scales of interest (i.e. seasonality, interannual variability, long-term trends, climate change projections).

6. ORGANIZACIÓN DOCENTE

CONTENIDOS

1	The climate system
2	Meteorology
3	Hidroclimatology
4	Oceanography
5	Climate Variability
6	Climate Change

7. MÉTODOS DE LA EVALUACIÓN				
Descripción	Tipología	Eval. Final	Recuper.	%
Exámenes parciales	Actividad de evaluación con soporte virtual	No	Sí	50,00
Ejercicios/problemas	Examen escrito	No	Sí	40,00
Attendance and participation	Otros	No	No	10,00
TOTAL				100,00
Observaciones				
It is mandatory to attend, at least, the 80% of the classroom teaching.				
Criterios de evaluación para estudiantes a tiempo parcial				
Students taking the course on a part-time basis must complete the same assignments and exams as students taking the course on a full-time basis. Due to their condition, the deadline for the quizzes and assignments will be flexible. The student must communicate its part-time basis status at the beginning of the course
