UNIVERSIDAD DE CANTABRIA

School of Industrial Engineering and Telecommunications

SUBJECT TEACHING GUIDE

G1629 - Advanced separation technologies

Degree in Chemical Engineering

Academic year 2023-2024

1. IDENTIFYING DATA									
Degree	Degree in Chemical Engineering			Type and Year	Optional. Year 4				
Faculty	School of Industrial Engineering and Telecommunications								
Discipline	SUBJECT OPTION C: GUIDANCE IN ADVANCED CHEMICAL ENGINEERING Optional Module								
Course unit title and code	G1629 - Advanced separation technologies								
Number of ECTS credits allocated	6	Term	Semeste		er based (1)				
Web									
Language of instruction	Spanish	English Friendly	Yes	Mode of a	delivery	Face-to-face			

Department	DPTO. INGENIERIAS QUIMICA Y BIOMOLECULAR
Name of lecturer	EUGENIO BRINGAS ELIZALDE
E-mail	eugenio.bringas@unican.es
Office	E.T.S. de Ingenieros Industriales y de Telecomunicación. Planta: - 2. DESPACHO EUGENIO BRINGAS ELIZALDE (S2013)
Other lecturers	PEDRO MANUEL GOMEZ RODRIGUEZ MARTA HERRERO GONZALEZ

3.1 LEARNING OUTCOMES

- Be able to know the fundamentals and applications of rate-controlled separation processes:

- Membrane-based separation processes
- Solid-fluid separation processes

School of Industrial Engineering and Telecommunications

4. OBJECTIVES

Be able to know and understand from a qualitative and quantitative point of view the phenomena taking place in membrane units and adsorption/ion exchange columns.

Be able to identify and compare advanced separation processes on their application in solving separation problems in the context of industry and environment

6. COURSE ORGANIZATION

CONTENTS			
1	 UNIT 1: Introduction to advanced separation processes Introduction Definition and classification of advanced separation processes Examples of environmental and industrial applications 		
2	 UNIT 2. Membrane-based separation processes Pressure driven membrane processes: microfiltration (MF), ultrafiltration (UF), reverse osmosis (RO) and nanofiltration (NF). Fundamentals, design and applications. Concentration gradient driven membrane processes: pervaporation, gas permeation, dialysis, membrane-based solvent extraction. Fundamentals, design and applications. Other membrane-based separation processes: electrodialysis, forward osmosis and pressure retarded osmosis. 		
3	 UNIT 3. Fluid-solid separation processes 3.1. Adsorption. Fundamentals, design and applications. 3.2. Ion Exchange. Fundamentals, design and applications. 		

7. ASSESSMENT METHODS AND CRITERIA									
Description	cription Type		Reassessn	%					
Prersentation of practical sessions	Oral Exam	No	Yes	50,00					
Portfolio	Others	No	Yes	50,00					
TOTAL									
Observations									
The student not following the continuos assessment procedure will take a final exam in the dates previously scheduled. In case of interruption of face-to-face learning by activation of health alert activation, the assesment procedure will not be modified and it will be performed using virtual tools.									
Observations for part-time students									

Article 24 from 'Reglamento de los Procesos de Evaluación en la Universidad de Cantabria' will be applied

School of Industrial Engineering and Telecommunications

8. BIBLIOGRAPHY AND TEACHING MATERIALS
