

SUBJECT TEACHING GUIDE

G1953 - Calculus

Degree in Civil Engineering

First Degree in Civil Engineering

Academic year 2023-2024

1. IDENTIFYING DATA					
Degree	Degree in Civil Engineering First Degree in Civil Engineering			Type and Year	Core. Year 1 Core. Year 1
Faculty	School of civil Engineering				
Discipline	BASIC MATHEMATICS FOR ENGINEERING				
Course unit title and code	G1953 - Calculus				
Number of ECTS credits allocated	6	Term	Semester based (1)		
Knowledge Field					
Web					
Language of instruction	Spanish	English Friendly	Yes	Mode of delivery	Face-to-face

Department	DPTO. MATEMATICA APLICADA Y CIENCIAS DE LA COMPUTACION				
Name of lecturer	JOAQUIN BEDIA JIMENEZ				
E-mail	joaquin.bedia@unican.es				
Office	E.T.S. de Ingenieros de Caminos, Canales y Puertos. Planta: + 1. DESPACHO (1047)				
Other lecturers					

4. OBJECTIVES

In the Civil Engineering syllabus, the Calculus course serves as an introduction to essential mathematical tools that students will utilize throughout their studies. The objectives include developing proficiency in mathematical language and reasoning, cultivating intellectual work habits, understanding the modeling potential of calculus, gaining operational skills in manipulating mathematical functions and their properties, comprehending and applying differential and integral calculus in single and multiple variables to physics and engineering problems, familiarizing with relevant software and programming tools for problem-solving, and instilling a commitment to independent and collaborative study.

6. SUBJECT PROGRAM	
CONTENTS	
1	<p>BLOCK I: REAL AND COMPLEX NUMBERS, SEQUENCES, AND NUMERICAL SERIES. REAL UNIVARIATE FUNCTIONS.</p> <p>UNIT 1: REAL AND COMPLEX NUMBERS, NUMERICAL SEQUENCES, SERIES, AND POWER SERIES.</p> <p>1.1. Real numbers: Axiomatics of real numbers. 1.2. Geometric representation and key concepts of the real line. 1.3. Complex numbers: Definition. 1.4. Geometric representation of complex numbers. 1.5. Operations with complex numbers. 1.6. Numerical sequences and series: Definitions. 1.7. Convergence criteria for numerical series.</p> <p>UNIT 2: REAL UNIVARIATE FUNCTIONS.</p> <p>2.1. Concept and definitions of functions. Operations with functions. 2.2. Elementary functions. 2.3. Properties of even and odd functions, periodicity, symmetry, and dimension. 2.4. Limit of a function at a point: Definition and properties. 2.5. Indeterminate forms. 2.6. Continuous function at a point and within an interval: Types of discontinuities. 2.7. Theorems about continuous functions. 2.8. Properties of differentiable functions at a point and within an interval. 2.9. Rolle's and Mean Value Theorems. 2.10. Application of the derivative to the calculation of limits: L'Hôpital's rule. 2.11. Representation of functions as power series: Taylor and Mac-Laurin formulas. Local approximation of functions.</p>
2	<p>BLOCK II: INTEGRAL CALCULUS OF FUNCTIONS OF ONE VARIABLE</p> <p>UNIT 3: INTEGRAL CALCULUS</p> <p>3.1. Calculation of primitives: Definitions and properties. 3.2. Integration methods. 3.3. Riemann integral: Interpretation and properties. 3.4. Mean value theorem, Fundamental Theorem of Calculus, and Barrow's rule. 3.5. Improper integrals. 3.6. Parameterization of curves and polar coordinates. 3.7. Applications of integrals: Calculation of planar areas, volumes of revolution, surfaces of revolution, and lengths of curves in Cartesian, parametric, and polar coordinates.</p>

3	<p>BLOCK III: REAL MULTIVARIATE FUNCTIONS</p> <p>UNIT 4: REAL MULTIVARIATE SCALAR AND VECTOR FIELDS</p> <p>4.1. Introduction to multivariate functions.</p> <p>4.2. Limits of scalar functions.</p> <p>4.3. Limits of vector-valued functions.</p> <p>4.4. Continuity of functions of several variables.</p> <p>4.5. Partial derivatives: Introduction, definition, and geometric interpretation.</p> <p>4.6. Continuity and partial derivatives: Partial derivatives of higher orders.</p> <p>4.7. Differential: Differentiability, continuity, and a sufficient condition for differentiability.</p> <p>4.8. Gradient: Definition, gradient vector, directional derivative, and gradient with contour lines.</p> <p>4.9. Extremes and optimization: Lagrange multipliers.</p>
---	---

7. ASSESSMENT METHODS AND CRITERIA				
Description	Type	Final Eval.	Reassessn	%
Computer practice reports	Laboratory evaluation	No	No	12,00
Continuous evaluation exercises	Others	No	No	28,00
Partial Exam Block I	Written exam	No	Yes	15,00
Partial Exam Block II	Written exam	No	Yes	15,00
Partial Exam Block II	Written exam	Yes	Yes	30,00
TOTAL				100,00
Observations				
<p>Students attending the extraordinary assessment will take a comprehensive exam, accounting for 60% of the final grade, covering the entire course syllabus, irrespective of prior approval of individual parts during regular evaluation.</p> <p>Failure to adhere to prescribed test formats (e.g., report templates, designated answer spaces in written exams) will result in penalties. Additionally, the following actions will be penalized:</p> <ul style="list-style-type: none"> Unjustified answers. Inappropriate use of terminology and mathematical notation. Untidy work, excessive corrections, etc. Frequent spelling/grammar errors. Demonstrating a lack of fundamental mathematical skills in procedures. <p>In exceptional cases supported by valid justifications (e.g., health restrictions), remote completion of assessment tests may be permitted with prior authorization from the Academic Authority.</p>				
Observations for part-time students				
<p>The course is accessible through the University of Cantabria Moodle platform. Part-time students are required to meet the same evaluation criteria as full-time students. However, in their case, the continuous assessment tasks assigned throughout the course may be completed individually and submitted in electronic format.</p> <p>Additionally, part-time students have the option, exclusive to them, to take a single written exam covering the material from all three thematic blocks. This exam carries a weight of 60% towards the final grade and will be administered on the scheduled final exam date.</p>				

8. BIBLIOGRAPHY AND TEACHING MATERIALS

BASIC

Larson, L. y Edwards, B. H. Cálculo I y II. 9ª ed. Mc Graw Hill. ISBN: 978-970-10-5710-0.
<http://catalogo.unican.es/cgi-bin/abnetopac/?TITN=263113>

Material puesto a disposición para clase (presentaciones, ejercicios, piezas audiovisuales y programas de software y código)
