School of Mines and Energy Engineering

SUBJECT TEACHING GUIDE

G615 - Mathematical Methods in Engineering

Degree in Mining Resources Engineering

Academic year 2023-2024

1. IDENTIFYING DATA									
Degree	Degree in Mining Resources Engineering			Type and Year	Core. Year 2				
Faculty	School of Mines and Energy Engineering								
Discipline	Subject Area: Mathematics Basic Training Module								
Course unit title and code	G615 - Mathematical Methods in Engineering								
Number of ECTS credits allocated	6	Term Semes		Semeste	ter based (1)				
Web									
Language of instruction	Spanish	English Friendly	No	Mode of o	delivery	Face-to-face			

Department	DPTO. MATEMATICA APLICADA Y CIENCIAS DE LA COMPUTACION		
Name of lecturer	DIEGO RUIZ ANTOLIN		
E-mail	diego.ruizantolin@unican.es		
Office	E.T.S. de Ingenieros Industriales y de Telecomunicación. Planta: - 5. DESPACHO (S5016)		
Other lecturers	SARA PEREZ CARABAZA		

School of Mines and Energy Engineering

3.1 LEARNING OUTCOMES

- Solve non-linear equations

- Interpolate and approximate functions and numerical data
- Numerical integrals and derivatives
- Use the most adequate methods to solve systems of linear equations
- Model and solve basic scientific and technical mathematical problems
- Model basic optimization problems of practical use in engineering
- Identify the most adequate techniques to solve optimization problems
- Solve linear programming problems
- Knowledge and computation of the most important statistical measures
- Compute probabilities of outcomes in practical problems
- Use random variables, recognizing their value to model many practical phenomena
- Recognize practical situations where the most common probability distributions arise

4. OBJECTIVES

The overall aim of the course is an introduction to numerical methods, optimization and statistical data analysis

Introduce the students to mathematical problem solving techniques using a computer and applied to modelling scientific and technical problems.

Use statistics to characterize the variability and quantify random processes

6. COURSE ORGANIZATION				
CONTENTS				
1	Statistics			
1.1	Descriptive statistics			
1.2	Probability			
1.3	Random variables			
1.4	Common probability models			
2	Numerical methods			
2.1	Introduction			
2.2	Numerical solution to non-linear equations			
2.3	Numerical interpolation, integration and differentiation			
2.4	Numerical solution to systems of non-linear equations			
3	Optimization			
3.1	Linear programming and optimization			

7. ASSESSMENT METHODS AND CRITERIA							
Description	Туре	Final Eval.	Reassessn	%			
Programming work	Work	No	No	10,00			
Periodic exams	Written exam	No	No	20,00			
Exam of the first part of the subject corresponding to Statistics (theory and practical problems)	Written exam	No	Yes	20,00			
Exam of the second and third parts of the subject corresponding to Numerical Analysis and Optimization (theory and practical problems)	Written exam	Yes	Yes	50,00			
TOTAL							
Observations							

There will be two exams for the three different parts of the subject. One of them will test the contents of the part corresponding to Statistics and the other one will be about the part corresponding to Numerical Methods and Optimization. The first exam will take place shortly after the end of the first part of the subject.

Observations for part-time students

Part-time students can take both parts of the final exam at the end of the semester. The rest of the assessment methods will take place as for the rest of the students.
