School of Industrial Engineering and Telecommunications

### **3.1 LEARNING OUTCOMES**

- Understanding and analyze the balanced and unbalanced three-phase systems.

- Determining the powers of a three-phase system. Knowing the methods of measurement of a three-phase power system.

Improve the power factor of a three-phase network.

- Understanding the operation and applications of passive filters.

- Understanding the concept of quadrupole and its applications to the study of electrical and electronic systems. Knowing the forms of association calculating the parameters of the resulting quadrupole.

- Resolving transient circuits of first order representing the voltages and currents. Identify and analyze the work regimes of the circuits of second order in the time domain.

- Knowing the general principles of electrical machines and their applications.

- Knowing the basic measuring devices, its constant and connections. Measurement of voltage, current, power and other electrical parameters, applying the tools, methods and techniques.

### 4. OBJECTIVES

Providing students with a set of analytical techniques that allow easy understanding, resolution and use of electrical systems.

Providing a set of concepts sufficiently flexible to be used in other subjects of the specialty.

Develop and exercise analytical skills

### 6. COURSE ORGANIZATION

| CONTENTS |   |  |  |  |
|----------|---|--|--|--|
| 1        | THREE-PHASE SYSTEMS: previous definitions. Study and analysis of phase systems to three and four-wire, balanced and unbalanced. Powers and measures of active and reactive power in three-phase systems. Power factor improvement.  |  |  |  |
| 2        | INTRODUCTION TO SYNTHESIS OF CIRCUITS: Introduction. Scale. Passive filters: low pass, high pass, bandpass, bandpass, bandstop. Overview of active filters.   |  |  |  |
| 3        | QUADRUPOLE: Introduction. Quadrupole concept. Parameters of a quadrupole. Association quadrupoles.  |  |  |  |
| 4        | TRANSIENT CIRCUITS: Introduction. Transients in circuits of first order with one energy storage element and both DC and AC excitation. Transients in circuits of first order with several energy storage elements. Transients in circuits of second order without excitement nor external sources. Transient response in multi-mesh circuits. |  |  |  |
| 5        | INTRODUCTION TO ELECTRICAL MACHINES: Introduction to electrical machines. Types of electrical machines.<br>Applications of electric machines.   |  |  |  |
| 6        | Labs in the course.   |  |  |  |

#### School of Industrial Engineering and Telecommunications

| 7. ASSESSMENT METHODS AND CRITERIA   |              |             |           |       |  |  |  |  |
|--|--------------|-------------|-----------|-------|--|--|--|--|
| Description  | Туре         | Final Eval. | Reassessn | %     |  |  |  |  |
| Written exam: Contents of blocks 1,2 and 3.<br>Written exam: Contents of blocks 4,5 and 6.<br>Attendance to laboratory sessions is mandatory to<br>pass the course | Written exam | No          | Yes       | 50,00 |  |  |  |  |
| Written exam: Contents of blocks 1,2 and 3.<br>Written exam: Contents of blocks 4,5 and 6.   | Written exam | Yes         | Yes       | 50,00 |  |  |  |  |
| TOTAL 100  |              |             |           |       |  |  |  |  |

Observations

For the purpose of continuous assessment, if exceeded (greater or equal to 4 out of 10) partial test may be performed on the final exam only the second part not assessed, having obtained her average rating of 5 out of 10 as a minimum to pass the course.

If the partial test (less than 4 out of 10) is not exceeded, the final exam will be full.

The remote evaluation of the works, practical laboratory exercises and written tests is foreseen, in the case of a new health

alert by COVID-19 making it impossible to conduct the evaluation in person

Observations for part-time students

The evaluation will be conducted with the same criteria as full-time students.
