### 3.1 LEARNING OUTCOMES

- To know, comprehend and be able to apply advance techniques of Probability and Statistics in professional situations and in doing research in Mathematics and Computation.

## 4. OBJECTIVES

Provide the students with the proficiency and techniques required for the professional environment and the research in probability and statistics.

| 6. COURSE ORGANIZATION |  |
| :--- | :--- |
| 1 | Advance probability (inequalities of Hoeffdfing, Jensen and Tchevichev, strong law of large numbers, Kullback-Leibler <br> divergence) |
| 2 | Estimation with noise and statistical data depth. |
| 3 | Nonparametric hypothesis testing (permutation methods and bootstrap) |
| 4 | Combination of hypothesis tests (FDR and FDR with dependency). |
| 5 | Sequential analysis. |
| 6 | Stochastic processes (goodness of fit, Markov models and hidden Markov models). |
| 7 | Monte Carlo methods. |
