

## SUBJECT TEACHING GUIDE

### G284 - Physics

#### Degree in Telecommunication Technologies Engineering

#### First Degree in Telecommunication Technologies Engineering

Academic year 2024-2025

1. IDENTIFYING DATA					
Degree	Degree in Telecommunication Technologies Engineering First Degree in Telecommunication Technologies Engineering			Type and Year	Core. Year 1 Core. Year 1
Faculty	School of Industrial Engineering and Telecommunications				
Discipline	Subject Area: Physics Basic Training Module				
Course unit title and code	G284 - Physics				
Number of ECTS credits allocated	6	Term	Semester based (2)		
Knowledge Field					
Web					
Language of instruction	Spanish	English Friendly	Yes	Mode of delivery	Face-to-face

Department	DPTO. CIENCIAS DE LA TIERRA Y FISICA DE LA MATERIA CONDENSADA				
Name of lecturer	PABLO GARCIA FERNANDEZ				
E-mail	pablo.garciafernandez@unican.es				
Office	Facultad de Ciencias. Planta: + 2. DESPACHO PROFESORES (2007)				
Other lecturers	FERNANDO AGUADO MENENDEZ JAVIER RUIZ FUERTES				

#### 4. OBJECTIVES

Know the basic concepts and variables associated with the Mechanics, Waves and Electromagnetism. Being able to solve analytically and / or numerically practical situations associated with these concepts.

Appreciate physics as a way to understand nature. Being able to verbally make judgments about practical situations related to the contents of the subject.

Identify the key points of a physical phenomenon, how to analyze them experimentally considering the proposed model and mathematical methods needed and provide a quantitative result testable with experience.

Analyze and present the results taking into account the accuracy of the instruments used.

#### 6. SUBJECT PROGRAM

##### CONTENTS

1	<p>ITEM 1. VECTORS. Magnitudes. Coordinate systems and components of a vector. Vector operations: addition, subtraction, scalar product, vector product, mixed product. Derivatives and integrals. Introduction to scalar and vector fields. A moment vector about a point. Vector system: resultant and resultant moment about a point. Varignon theorem. Systems of null resultant.</p> <p>ITEM 2. KINEMATICS OF THE PARTICLE. Path, vectors position, velocity and mean and instantaneous acceleration. Rectilinear motion, uniform and accelerated. Parabolic motion. Intrinsic components of acceleration. Circular motion.</p> <p>ITEM 3. PARTICLE DYNAMICS. Newton's laws, force concept. Linear momentum and conservation principle. Equilibrium conditions. Angular momentum. Forces in nature. Coulomb's law. Lorentz's force and its effect on charged particles.</p> <p>ITEM 4. WORK, POWER AND ENERGY. Work done by a force. Power. Kinetic energy. Conservative forces and potential energy. Force as gradient of potential energy. Conservation of mechanical energy. Potential energy curves. Nonconservative forces. Time dependent forces and impulse. Application on electromagnetic forces. Field and potential.</p>
2	<p>ITEM 5. ELECTRIC INTERACTION. Electric charge. Coulomb's law. Quantization of electric charge. Principle of conservation of electric charge. Electric field. Lines of electric fields. Electric flux and Gauss's theorem. Electric potential. Relationship between the electric potential and the electric field. Potential of a point charge.</p> <p>ITEM 6. MAGNETIC INTERACTION. Charges in movement, current and magnetic field. Biot-Savart's law. Forces and momenta on conductors. Ampere's law. Applications of Ampere's law and its limitations. Faraday's and Lenz's laws.</p> <p>ITEM 7. MATERIAL SYSTEMS. Insulators and metals. Electric susceptibility. Magnetic materials. Magnetic susceptibility.</p>
3	<p>ITEM 8. INTRODUCTION TO THE WAVES IN PHYSICS. Wavefunction, wave propagation in space and time. Wave equation. Wave speed. Longitudinal and transversal waves. Energy and transport of energy by a wave. Pressure waves. Intensity and intensity levels. Superposition of waves. Standing waves. Doppler effect. Nature of light, wave-particle duality. Energy and momentum of a photon. Speed of light. Huygens' principle. Interference conditions, Young's experiment. Diffraction.</p>

7. ASSESSMENT METHODS AND CRITERIA				
Description	Type	Final Eval.	Reassessn	%
Memory laboratory practices	Laboratory evaluation	No	No	15,00
Final exam	Written exam	Yes	Yes	0,00
Test (part 1)	Written exam	No	Yes	40,00
Test (part 2)	Written exam	No	Yes	40,00
Participation in the classroom	Others	No	No	5,00
<b>TOTAL</b>				<b>100,00</b>
<b>Observations</b>				
Two partial exams will be made. The first one at the end of item 4 ( Mechanics ) and the second at the end of item 8 ( Electromagnetism and waves). To pass the subject a minimum grade of 4 will be required in partial exams and an overall average over 5. Up to 0.5 points in each partial could be evaluated through work in the classroom. If plagiarism (copying Internet or reports of previous courses) are detected in practice reports will be scored with zero (fail). All new students to the course are required to take on the lab work.				
<b>Observations for part-time students</b>				
For new part-time students to attend practical classes (Lab work) is mandatory, as well as to write the reports.				

8. BIBLIOGRAPHY AND TEACHING MATERIALS
<b>BASIC</b>
R. A. Serway. "Física". Ed. Interamericana. 1985.
