

SUBJECT TEACHING GUIDE

G287 - Signals and Systems

Degree in Telecommunication Technologies Engineering

First Degree in Telecommunication Technologies Engineering

Academic year 2024-2025

| 1. IDENTIFYING DATA | | | | | |
|----------------------------------|--|------------------|--------------------|------------------|------------------------------|
| Degree | Degree in Telecommunication Technologies Engineering First Degree in Telecommunication Technologies Engineering | | | Type and Year | Core. Year 1 Core. Year 1 |
| Faculty | School of Industrial Engineering and Telecommunications | | | | |
| Discipline | Subject Area: Linear Circuits and Systems Basic Training Module | | | | |
| Course unit title and code | G287 - Signals and Systems | | | | |
| Number of ECTS credits allocated | 6 | Term | Semester based (2) | | |
| Knowledge Field | | | | | |
| Web | https://personales.unican.es/domingom/SyS | | | | |
| Language of instruction | Spanish | English Friendly | No | Mode of delivery | Face-to-face |

| | | | | | |

| Department | DPTO. INGENIERIA DE COMUNICACIONES | | | | |
| Name of lecturer | MARTA DOMINGO GRACIA | | | | |
| E-mail | marta.domingo@unican.es | | | | |
| Office | Edificio Ing. de Telecomunicación Prof. José Luis García García. Planta: - 2. DESPACHO (S210) | | | | |
| Other lecturers | JOSE BASTERRECHEA VERDEJA | | | | |

4. OBJECTIVES

Identify signals as functions carrying information and a system as a process in which signals are transformed. Be able to analyze signals and systems in both the time and frequency domains.

| 6. SUBJECT PROGRAM | |
|--------------------|--|
| CONTENTS | |
| 1 | Signals and systems: Continuous-time and discrete-time signals. Transformations of the independent variable. Basic signals: exponential and sinusoidal signals, the unit step and the unit impulse functions. Basic system properties. |
| 2 | Linear time-invariant systems: Convolution: impulse response representation for LTI systems. Properties of LTI systems. Other representations of LTI systems. |
| 3 | Fourier Analysis: Fourier Series representation of continuous-time periodic signals (FS). Fourier series representation of discrete-time periodic signals (DTFS). Representation of continuous-time aperiodic signals, the continuous-time Fourier transform (FT). Representation of discrete-time aperiodic signals, the discrete-time Fourier transform (DTFT). Fourier representation properties. The Fourier transform for periodic signals. |
| 4 | Applications of Fourier representations: Frequency response of LTI systems. Sampling and reconstruction of continuous-time signals from their samples. Application to communication systems |
| 5 | The Laplace transform: The bilateral Laplace transform. The region of convergence for Laplace transform. The inverse Laplace transform. LTI systems analysis characterized by linear constant-coefficient differential equations. Analysis and characterization of LTI systems. The unilateral Laplace transform. Solving differential equations with initial conditions. |
| 6 | The z-transform. Fourier transform and z-transform relationship. The region of convergence for the z-transform. The inverse z-transform. Analysis and characterization of discrete-time LTI systems using z-transforms. LTI systems characterized by linear constant-coefficient differential equations. |

| 7. ASSESSMENT METHODS AND CRITERIA | | | | |
|--|-----------------------|-------------|-----------|--------|
| Description | Type | Final Eval. | Reassessn | % |
| Final Exam (PF) | Written exam | Yes | Yes | 60,00 |
| Midterm exam. Blocks 1-2 (PI) | Written exam | No | Yes | 15,00 |
| Evaluation of Proposed questions and problems (AE) | Others | No | No | 10,00 |
| Classroom work (TA) | Others | No | No | 5,00 |
| Computer based exercises (PLO) | Laboratory evaluation | No | No | 10,00 |
| TOTAL | | | | 100,00 |
| Observations | | | | |
| <p>An evaluation exam will take place at the end of block 2. Even if you pass the partial exams, the contents will be included in the final exam.</p> <p>The proposed non presential activities will be evaluated (individual and group work on problem solving). Classroom activities will only be evaluated in the case that at least 50% of attendance has been completed.</p> <p>Computer labs are mandatory for all enrolled students. The evaluation of simulation labs will make up 10% of the overall grade. In order to pass the subject, it will be necessary to obtain a weighted grade equal or greater than 5 points out of 10. The overall grade will be calculated by:</p> <p>Final Grade: $\text{MAX}\{(0.10 \cdot \text{PLO} + 0.10 \cdot \text{AE} + 0.05 \cdot \text{TA} + 0.15 \cdot \text{PI} + 0.60 \cdot \text{PF}); (0.90 \cdot \text{PF} + 0.10 \cdot \text{PLO})\}$</p> <p>In case the grade obtained in the final test is lower than 4 out of 10, the subject will be failed and the overall grade will be obtained using:</p> <p>Final grade $[\text{MIN}\{4.90; (0.10 \cdot \text{PLO} + 0.10 \cdot \text{AE} + 0.05 \cdot \text{TA} + 0.15 \cdot \text{PI} + 0.60 \cdot \text{PF})\}]$</p> <p>In the extraordinary call, all contents will be evaluated in a final test that will make up 90% of the overall grade. Computer labs will make up the remaining 10% of the overall grade.</p> | | | | |
| Observations for part-time students | | | | |
| The same rules will apply for part-time and full-time students. | | | | |
