

SUBJECT TEACHING GUIDE

G651 - Data Structures

Double Degree in Physics and Mathematics
 First Degree in Computer Systems Engineering
 Degree in Computer Systems Engineering
 Degree in Mathematics
 Degree in Mathematics

Academic year 2024-2025

1. IDENTIFYING DATA			
Degree	Double Degree in Physics and Mathematics First Degree in Computer Systems Engineering Degree in Computer Systems Engineering Degree in Mathematics Degree in Mathematics		Type and Year Optional. Year 5 Compulsory. Year 2
Faculty	Faculty of Sciences		
Discipline	Subject Area: Computer Programming Mention in Computer Science Compulsory Module		
Course unit title and code	G651 - Data Structures		
Number of ECTS credits allocated	6	Term	Semester based (1)
Web			
Language of instruction	Spanish	English Friendly	Yes Mode of delivery Face-to-face

Department	DPTO. INGENIERÍA INFORMÁTICA Y ELECTRÓNICA
Name of lecturer	MARIO ALDEA RIVAS
E-mail	mario.aldea@uncan.es
Office	Facultad de Ciencias. Planta: + 3. DESPACHO - COMPUTADORES TIEMPO REAL (3054)
Other lecturers	JOSE CARLOS PALENCIA GUTIERREZ JUAN RAMON SANTANA MARTINEZ

3.1 LEARNING OUTCOMES

- Know the fundamentals of computer programming and of programming reasoning, including modularity and object orientation.
- To be able to correctly and effectively apply criteria for the modular decomposition of problems to a sufficient degree to complete the programming of their solution.
- Know how to apply an object oriented methodology, including class diagrams.
- Being able to choose and effectively use the most efficient data structures based on the characteristics desired for the programs in which they are used, having a wide and flexible repertoire of related concepts: chained structures, hash tables, search trees , multipath trees.
- Know the different implementation techniques of the main data structures and know how to create special data structures , adapted to specific problems.
- Know with familiarity the consequences of logarithmic, linear, quadratic, polynomial and exponential growth, and be able to assess the computational complexity of a given problem, thus explaining the behaviour in terms of execution time of a program that solves it.

4. OBJECTIVES

Understanding of the basics of the analysis, design, implementation, verification and testing of the most important Abstract Data Types.

Know how to use the Abstract Data Types as the base components of software applications , choosing the Abstract Data Types more appropriate to the temporal and spatial requirements of each application.

6. SUBJECT PROGRAM

CONTENTS

1	Introduction
2	Analysis of algorithms
3	Lists
4	Stacks and queues
5	Trees
6	Maps.
7	Ordered ADTs.
8	Sets

7. ASSESSMENT METHODS AND CRITERIA

Description	Type	Final Eval.	Reassessn	%
Evaluation of the exercises performed by the students in the laboratory sessions.	Laboratory evaluation	No	Yes	15,00
Laboratory and written evaluation. Two or more exams performed during the teaching period.	Laboratory evaluation	No	Yes	85,00
TOTAL				100,00
Observations				
In order to pass the subject it is compulsory to obtain the minimum grade in the Laboratory and Written evaluations (4.5).				
Observations for part-time students				
Part-time students do not need to attend to the Laboratory evaluations performed during the course. They can pass the subject by attending to the evaluations in the ordinary and/or extraordinary periods.				

8. BIBLIOGRAPHY AND TEACHING MATERIALS

BASIC
Michael T. Goodrich, Roberto Tamassia, Data structures and algorithms in Java. John Wiley & Sons, 2006.
Cormen, Thomas H.; Leiserson, Charles E., Rivest, Ronald L., Stein, Clifford, Introduction to Algorithms (3rd ed.). MIT Press and McGraw-Hill, 2009.
