#### 4. OBJECTIVES

Enable the representation of components and assemblies used in engineering applications through the use of Representation Systems
Evaluate the necessity of employing technical drawing as the most appropriate medium of communication among the vessel, the workshop, and the shipyard.
Provide the student with the requisite competencies for the precise interpretation of ship schematics
Promote the development of spatial visualization skills and their application in the calculation of geometric projections
Handle the elements of Technical Drawing, including drawing instruments, presentation formats, and scales
Achieve proficiency in the standards and normalization criteria governing technical drawing practices
Develop the capacity to infer and implement fundamental principles of engineering design
Interpretation of machinery drawings and manuals, as well as diagrams of piping, hydraulic, and pneumatic systems, in accordance with the competency 'Maintenance and repair of shipboard machinery and equipment' as defined in Regulation A-III/1 of the STCW Convention, as amended
